Current Position

AI & Software Engineer
MBL HighTech • Dec 2024 – Present

- Build AI voice-based telephony systems that engage and convert leads via natural dialogue
- Designed LLM-powered chatbots for daily user engagement and platform awareness
- Architected LangGraph + FastAPI + Postgres pipelines for multi-agent workflows and CRM integration

Research & Development

Founder — NaijaLingo
In Development

- Developing a speech AI platform offering TTS + STT in Nigerian languages including Yoruba, Igbo, Hausa, and Pidgin English
- Building authentic voice synthesis with emotion, tone, and accent cloning for inclusive AI communication

Education

B.Sc. Physics
University of Benin

Certifications

- Machine Learning with Python: Zero to GBMs — Jovian.ai
- Deep Learning with PyTorch: Zero to GANs
- AI for Medical Diagnosis — Coursera

Core Tech Stack

Python

Transformer

Golang

LangGraph

FastAPI

PostgreSQL

PyTorch

TensorFlow

Docker

RAG

Speech AI

Voice Cloning

MLOps

Smart Contracts

AWS

Huggingface

Google Collab

Focus Areas

Voice AI • LLM Agents • Speech Systems • Chatbots • Image Processing • Applied ML • Production AI Pipelines

Previous Experience

Machine Learning Engineer

NewWave Telecom & Technologies Inc (USA) • Aug 2023 – Jun 2024

- Developed an AI-powered RFP Engine integrating CrewAI and advanced language models to automate proposal generation by extracting and synthesizing data from RFPs, company documents, and real-time web sources.
- Enhanced efficiency and accuracy through dynamic text, table, and visual content generation, including graphs, images, and flowcharts for comprehensive, high-quality proposal responses.
- Created multi-agent reinforcement pipelines combining LLMs, vision, and data analysis for proposal generation

Lead ML Engineer

Glodaris Technology (Abuja) • Jan 2022 – Mar 2023

- Led 3+ engineers to develop Face Recognition System (99.7% accuracy) for Nigerian border validation
- Designed real-time model monitoring microservices and trained officers on ML systems and Python

Machine Learning Engineer

Indicina • Jan 2021 – Jul 2021

- Contributed to DECIDE AI credit system, enabling accurate digital lending decisions
- Built predictive risk models, performed data mining, visualization, and end-to-end ML deployment

AI Engineer

AirSmat • Jan 2020 – Nov 2020

- Integrated drone-based AI for crop yield and disease detection, improving agricultural intelligence using Object detection models

Freelance Highlights (2019–Present)

36+ global clients • 50+ successful projects • 4.9★ rating

Text Analysis App

NLP web app with TF-IDF, LDA, BERTopic, and Sentence-BERT embeddings

Investroj.cz

Led development of a full-stack Apartment Web App that automated real-time property data collection, analysis, and visualization from srealty.cz.

STA Automation AI

AI-powered test automation with Llama 3 and Robot Framework

DAO Voting Agent

FastAPI + Web3.py + LangChain for conversational blockchain voting

Theoriq Docs Assistant

RAG-based agent using Embedchain and Flask

Naija Messenger

Golang app automating WhatsApp birthday wishes with AI

LLM based Text and Audio data Model Training and Fine-tuning

Trained a variety of models for text and audio data using LLMs, TTS and STT models and fine-tuned them for specific tasks.
