Experience: 7 years

Summary

Machine Learning Engineer and AI Software Engineer focused on scalable systems, deployment, and operations. Expertise in LLMs, Voice AI, Computer Vision, and multi-agent workflows. Built production-grade RAG, chatbots, and speech systems (STT/TTS) across healthcare, fintech, and govtech. Strong MLOps (Docker, MLflow, GitHub Actions), with hands-on AWS deployments; lead ML teams to deliver reliable, user-facing AI products.

Experience

Founder and CEO

9jalingoAI • Apr 2026 – Present

Website: www.9jalingo.org

Full-time • Remote (Federal Capital Territory, Nigeria)

Lead the development of cutting-edge AI solutions for natural text-to-speech, speech-to-text, voice AI, and language tools tailored to Yoruba, Hausa, Igbo, Pidgin, and Nigerian-accented English.

- Built an AI-driven platform supporting multiple Nigerian languages for speech synthesis and recognition.
- Developed scalable tools for businesses, developers, and creators to integrate African language AI into applications.
- Advocated for inclusive digital technology that preserves and promotes African linguistic heritage.

AI Team Lead

MBL HighTech • Jan 2026 – Present

Full-time • On-site (Nigeria)

- Built ClientLens, an AI-powered CRM client similarity engine that uses vector embeddings and real-time nearest-neighbor search to detect lookalike customers, prevent churn, and perform client cluster analysis.
- Oversaw automation of CRM workflows with n8n, integrating APIs, databases, and AI services for lead ingestion, enrichment, and follow-ups
- Directed LLM/ML pipeline evaluations; defined benchmarks for latency, accuracy, and reliability to guide model selection and prompt iteration
- Led R&D of voice-based AI systems: telephony services, speech signal processing, and custom TTS experimentation with transformer architectures

AI & Software Engineer

MBL HighTech • Dec 2024 – Dec 2025

- Built AI voice-based telephony systems; increased lead conversion by 20% via prompt/call-flow optimization
- Designed LLM chatbots for daily user engagement; cut response latency by 50% through retrieval and caching
- Architected LangGraph + FastAPI + Postgres pipelines for multi-agent workflows and CRM integration
- Implemented ML CI/CD (GitHub Actions) and Docker for repeatable releases; improved deployment time by 30%

Machine Learning Engineer

NewWave Telecom & Technologies Inc (USA) • Aug 2023 – Jun 2024

US federal health IT contractor (data & AI for large agencies)

- Built an AI-powered RFP engine (CrewAI + LLMs) to extract/synthesize content; cut drafting time from ~30 days to under 4 hours
- Generated structured text, tables, and visuals (graphs/flowcharts); increased proposal throughput by 20%
- AWS usage: S3 for corp docs/artifacts; EC2 for orchestration runners

Lead ML Engineer

Glodaris Technology (Abuja) • Jan 2022 – Mar 2023

Abuja-based technology company (computer vision & analytics)

- Led 3+ engineers to develop Face Recognition System (97.3% accuracy) for Nigerian border validation
- Designed real-time model monitoring microservices (Prometheus/Grafana) and trained officers on ML systems and Python

Machine Learning Engineer (Contract)

Indicina • Jan 2021 – Jul 2021

Website: indicina.co

Fintech credit decisioning platform (digital lending)

- Built core components of DECIDE AI credit platform; improved risk scoring AUC by 30%
- Developed predictive risk models and ML pipelines; partnered with product/risk, reducing manual review by 5%
- Tooling: scikit-learn, XGBoost, Pandas; APIs with FastAPI

AI Engineer (Contract)

AirSmat • Jan 2020 – Nov 2020

Website: airsmat.com

Drone analytics for precision agriculture

- Delivered drone-imagery pipelines for crop yield and disease detection (object detection)
- Data pipelines: S3 object storage for geospatial tiles; batch processing on EC2

Freelance Project Highlights (2023–Present)

36+ global clients • 50+ successful projects • 4.9★ rating

Text Analysis App

NLP web app with TF-IDF, LDA, BERTopic, and Sentence-BERT embeddings

Investroj.cz

Automated property data collection, analysis, and visualization (sreality.cz).

STA Automation AI

AI-powered test automation with Llama 3 and Robot Framework

DAO Voting Agent

FastAPI + Web3.py + LangChain for conversational blockchain voting

Education

B.Sc. Physics

University of Benin

Certifications

- Machine Learning with Python: Zero to GBMs — Jovian.ai
- Deep Learning with PyTorch: Zero to GANs
- AI for Medical Diagnosis — Coursera

Soft Skills

Leadership • Communication • Mentorship • Stakeholder Management • Problem Solving • Collaboration

Core Tech Stack

Artificial Intelligence • Machine Learning • Data Science • Python • Golang • Transformers • LLMs • LangChain • LangGraph • OpenAI API • CrewAI • FastAPI • Flask • PostgreSQL • Redis • Docker • CI/CD • MLflow

Focus Areas

Voice AI • LLM Agents • Speech Systems • Chatbots • Image Processing • Applied ML • Production AI Pipelines
